Hand-Over Document – AI-Powered Meeting Transcript Summariser

Mehfil Event Planners | Ezitech AI Internship (Task 6) | Intern: Waqar Nadeem

1. Project Overview

Mehfil Event Planners coordinates dozens of vendor and client meetings for weddings and events. This web tool lets users upload a meeting transcript (or paste text), automatically generates a clear executive summary with key decisions and action items, runs a simple quality checklist, and produces a downloadable Markdown / PDF report — removing the need for manual note-taking.

2. Architecture & Tech Stack

Frontend / App: Streamlit (single-file app.py) • **Model:** Open-source DistilBART (sshleifer/distilbart-cnn-12-6) via Hugging Face Transformers • **Chunking:** Sentence-aware splitting (~450 words) with light overlap • **Decision / Action extraction:** Lightweight rule-based patterns (no second LLM call) • **PDF:** ReportLab • **Parsers:** pypdf + python-docx • **Deployment:** Streamlit Community Cloud (CPU-only free tier).

3. How to Use

- Upload a .txt / .pdf / .docx transcript or paste text directly.
- Click **Generate Summary & Report**. Long transcripts are automatically chunked.
- Review the executive summary, extracted key decisions, action items and quality checklist.
- Download the report as Markdown or PDF for sharing with the client / internal team.
- Sample file: `sample_data/sample_transcript.txt`

4. Local Setup & Cloud Deployment

Local: `pip install -r requirements.txt && streamlit run app.py`
Cloud: Push repo to GitHub → share.streamlit.io → New app → select repo / main / app.py → Deploy. First run downloads model weights (~300 MB); later runs use Streamlit resource cache.

5. Limitations & Recommendations

- DistilBART is efficient but can miss subtle or implied decisions; always verify critical items against the original transcript.
- Action-item extraction is rule-based for speed and free-tier reliability; complex ownership language may need manual review.
- Very long meetings (> ~8 000 words) are multi-chunked; a merge pass is applied but some fine detail can still be lost.
- Recommended next steps: add speaker diarisation, optional LLM re-ranking of action items, and user login for history.

6. Deliverables Checklist

Item	Status
GitHub repository with full source	✓
Streamlit web app (Community Cloud)	✓ (update URL in README)
README with badge, setup, usage, deployment link	✓
Sample transcript + generated summary flow	✓
This one-page HandOver_Mehfil.pdf	✓
